Other CAD applications These applications either offer some form of CAD editing functionality and file manipulation, or support exporting and importing AutoCAD DWG files. Autodesk AliasMatch CAD is a cross-platform utility that lets you create cross-platform icons that can be used for 2D and 3D image editing. The plug-in also allows to work with 3D models and surfaces with generated and edited color maps and shadows. Inventor is a product for rendering 2D and 3D objects, and for the design and fabrication of mechanical parts. It is primarily used for product design and 3D engineering. It can be used for architectural design, mechanical engineering, power engineering, home design, vehicle design, civil engineering, entertainment, lighting, media and electronic design. With the Windows based Autodesk Inventor Product Design 2010 application, users can create 2D plans, 3D drawings and cut-outs, create part libraries, trace contours, annotate, dimension and annotate a 3D model. Autodesk Inventor is a multi-user, multi-platform application that runs on Windows, Mac OS X and Linux operating systems. Inventor is able to import, edit, export, print, animate and send e-mails. MicroStation is a CAD and BIM software package used primarily in the transportation, energy, public works, and water and wastewater sectors. Some manufacturers and construction firms utilize this program to plan and design a product such as a building, train, or bridge. It has a number of CAD features and tools, including full-size 2D and 3D geometry creation, interactive editing, and automatic dimensioning. The program can create over 40 views of the model, view the design from multiple angles, and manage the relationship of each part of the design to one another. Mechanical CAD Several products are designed specifically to work with mechanical design of machine tools. There is a wide range of mechanical CAD software available: AutoCAD, Mechanical Design, CAM, CATIA, Alibre, SolidWorks, Pro/ENGINEER, eCAD, OpenSCAD, RobotC, MSCAD, Rapid Computer, CNC Master, DesignSpark, Cogit, 3DME, NX, Solid Edge, Visual Solid, FreeCAD, MindSphere, UG Software Some other products are now marketed under the Mechanical CAD name, i.e.

Open a command window and enter the following command: Type: autocad.exe -r -inkey Press Enter. The key will not be printed anywhere. You should be able to open Autocad and the key should be imported automatically. Additional notes: - If the key is somehow corrupted, you can manually import it by replacing with the correct key name (which you can find here) - Use as the name of the key in order to open Autocad Photochemical determination of iron with 5,5'-dithiobis-(2-nitrobenzoic acid). A simple and highly sensitive spectrophotometric method has been developed for the determination of trace amount of iron(III) in aqueous samples. The method is based on the formation of a colored complex between iron(III) and 5,5'-dithiobis-(2-nitrobenzoic acid) (DTNB) which is measured at 412 nm. The complex formed is stable under the experimental conditions used for determination. The proposed method has been applied to the determination of iron(III) in synthetic and natural samples with satisfactory results.

1. Field of the Invention The present invention relates to a method of and apparatus for recording and reproducing a video signal on a recording medium such as a VTR tape. 2. Description of the Prior Art In general, the video signal is digitally recorded and reproduced on and from a VTR tape. As to this kind of recording and reproducing apparatus, there has been a great demand to have a mechanism for minimizing the noises from the head of the VTR tape, especially noises which are caused by the head-tape contact and which are accompanied with the phase change of the tape. Further, the requirement for a high-quality recorded image is strong. However, the conventional recording and reproducing apparatus does not satisfy all these requirements. The characteristics of the head and the mechanical properties of the tape influence the accuracy in the recording of a video signal. For example, in the case of a conventional apparatus wherein a magnetic head is used as the reproducing head, a reproduced output is lowered when a video signal is recorded under a small amplitude-modulated (hereinafter referred to as "A.M.") signal and under
